Subject Index, Volumes 1–10

Absolute torsional pendulum viscometer, **3**, 69
Acrylate polymers, adhesion to cellophane as measured by the peeling test, **6**, 387
Acrylonitrile–butadiene, flow behavior, **10:2**, 545
Adhesion of acrylate polymers to cellophane as measured by the peeling test, **6**, 387
Adhesive joints, peeling force of, **4**, 75
  polyethylene, **3**, 5
Adhesives, liquid, tackiness of, **1**, 3
Agitated vessels, fluid mixing in, **4**, 364
Aluminum alloys at elevated temperatures, vibration and wave propagation in, **6**, 157
Aluminum single crystals, plastic flow of, as revealed by interferometric cinemicrography, **6**, 394
Amine-cured epoxy resin, **9:1**, 450
Anisotropic amorphous media, secondary stresses, **3**, 101
Anisotropic fluids, elementary flows of, **10:1**, 215
  theory of, **4**, 29
Aqueous polymer solutions, secondary normal stress difference for, **9:2**, 273
Asphalt, dynamic mechanical properties, **4**, 279
  flow characteristics, **4**, 265
Asphalt concrete, stress–strain–time data for, **8**, 19
Attapulgite suspension in water, flow properties of, **5**, 67
Axial annular flow, measurement of P_{22}–P_{33} in, **9:1**, 458
Biharmonic solutions of certain integro-differential equations of linear viscoelasticity, **8**, 101
Birefringence, dynamic, of a thin fluid layer of oscillatory shear, **6**, 325
  flow, of polystyrene solutions, **7**, 45
  streaming, **6**, 393
  streaming, and rotary strain birefringence measurements, a comparison, **7**, 33
Birefringent techniques in two-dimensional flow, **6**, 317
Blood, human, rheology of, measurement near and at zero shear rate, **7**, 303
  shear-rate dependence of viscosity of, interaction of red cells and plasma proteins, **6**, 19
Blood flow, attempts in the mathematical analysis of, **7**, 25
  in vitro, **7**, 209
  pulsing, in capillary tubes, **10:1**, 440
Blood rheology, **5**, 85
  four separate "regimes of flow" or systems of, **3**, 213
  special problems, **6**, 13
Bond stresses and distributions in peel adhesion, **4**, 45
Boundary layer, effect of dilute polymer solute on, **9:1**, 456
Brabender farinograph, rheological studies with, **6**, 388
Brabender plastograph, rheological measurements with, **4**, 335
Branched polymers, solution and bulk properties of, **9:1**, 455
Branching, effect on the melt rheology of polyethylene, **9:1**, 255
Breakdown in fiber bundles, power law breakdown rule, **2**, 195

Bulk creep and recovery in systems with viscosity dependent upon free volume, **5**, 285
Butadiene–acrylonitrile, flow behavior, **10:2**, 545
Butadiene–carboxyl, flow behavior, **10:2**, 545
Capillaries, special, flow experiments with in the McKee worker–consistometer, **2**, 310
Capillary experiment in rheology, **2**, 263
Capillary flow, of molten polyethylene, photographic study of melt fracture, **1**, 203
viscoelastic behavior of polyethylene in, **10:1**, 299
Capillary flow measurements, effect of pressure losses in the barrel on, **9:1**, 13
Capillary model, non-Darcy flow, **10:2**, 603
Capillary rheometer, polymer melt flow behavior in the barrel of, **9:2**, 405
Capillary rheometry as a technique for predicting processing of elastomers, **5**, 329
Carboxyl–butadiene, flow behavior, **10:2**, 545
Carboxymethylene–water systems, yield stresses and flow properties of, **5**, 221
Cavitation dynamics in the splitting of thin liquid films, **6**, 197
Cellulose derivatives, rheology of various solutions of, **2**, 285
Cellulose nitrate solution, concentrated, dynamic mechanical and creep properties of, **3**, 211
Cereal protein monolayers, two-dimensional rheology and its application to, **6**, 384
Chain polymers, dependence of zero-shear melt viscosity and the related friction coefficient and critical chain length on measurable characteristics of, **9:1**, 453
Ciliated activity, an *in vitro* investigation of, **9:1**, 135
Circulatory system, mammalian, physical aspects of, **7**, 19
Clay, dynamic compression of, **10:1**, 253
Coalescence of latex dispersions, **2**, 307
Cohesive soil, energy dissipation of, by the Fourier transformation of stress relaxation response, **9:1**, 145
in the frequency domain, viscoelastic response of, **9:2**, 329
Cold-drawing of glassy polymers, **9:1**, 446
Colloid rheology, a dimensional approach to, **7**, 101
Colloids, linear associative, viscosity of dilute solutions of, **7**, 414
Communication problems in industrial rheology, **3**, 205
Complex modulus, on anomalies in the measurement of, **4**, 141
Compression, dynamic, of clay, **10:1**, 253
Concentrated (dilatant) solutions, flow behavior of, **2**, 239
Concentrated solutions, viscosity of, **9:1**, 321
Concentration dependence, of the Newtonian viscosity of prolate ellipsoids, **3**, 41
of the stress-optical coefficient, **4**, 159
Concentration distribution, in shear flow of monolayers of suspended particles, **10:1**, 229
Conservation laws for liquid crystals, **5**, 23
Consolidation, primary and secondary, rheology of, **7**, 418
Constant strain rates, nonlinear viscoelastic response of amorphous elastomers to, **6**, 61
Constitutive equations, for engineering use, **10:1**, 435
evaluation of, results obtained at high deformation rates, **9:1**, 457
for polymer solutions, **10:1**, 431

simple, development of, viscoelastic fluids, **7**, 421
Continuous media, thermostatics of, **3**, 212
Continuum theories, statistical, **9:1**, 339
Cooling time of strong glass fibers, **2**, 310
Couette viscometer, turbulent flows in, **10:1**, 335
Creep, and recovery properties of a zinc phosphinate polymer, **9:1**, 119
of snow under combined stress, **2**, 175
tensile, of polystyrene at elevated temperatures, **8**, 61
Creep compliance of natural and polybutadiene rubbers, **10:1**, 440
Creep recovery method, temperature dependence of mechanical behavior of polymer solids by, **7**, 253, **10:1**, 97
Crosslinked rubbers, mechanical losses and network structure, **9:1**, 450
Crystalline solids, mechanical resonance dispersion in, **3**, 208
at audio-frequencies, **2**, 307
Crystals, liquid, conservation laws for, **5**, 23
viscous motion of dislocations in, **3**, 209
Cylinder, spinning hollow circular, viscoelastic stress analysis of, with an ablating pressurized cavity, **7**, 357
Deformable media, thermodynamic analysis of, **9:2**, 389
Deformation, elastic shear, in viscoelastic flow of polymer melt, die wall restriction on, **7**, 333
finite, under pressurization in an infinitely long cylinder, **9:1**, 273
general linear viscoelastic, aspects of, **7**, 171
general plane strain, of an incompressible neo-Hookean body, **7**, 416
homogeneous thermomechanical, of an elastomer, **7**, 417
irrecoverable, a unified derivation of constitutive relations for, **9:1**, 159
large longitudinal retarded elastic, of rubberlike network polymers, **6**, 361
large longitudinal retarded elastic, of rubberlike network polymers, application of general formula of nonlinear response, **7**, 111
of rubbery materials, application of finite elastic theory to, **6**, 223
spherulite, models of, taking into account changes in volume, **10:1**, 432
viscoelastic, on the extension of classical irreversible thermodynamics to, **10:1**, 436
Degradation, effect on polyisobutylene solutions, **10:2**, 489
Dental materials and rheology, **4**, 131
Derivation, unified, of constitutive relations for irrecoverable deformation, **9:1**, 159
Determinism, principle of, and materials of the rate-type, **5**, 35
Dichroism, visible, of dyed polymer films, **9:1**, 452
Die entry geometry, effect on polymer melt fracture and extrudate distortion, **5**, 341
Dielectric constants, permeabilities, and conductivities of random media, **9:1**, 357
Die wall restriction on elastic shear deformation in viscoelastic flow of polymer melt, **7**, 333
Differentiation method in rheology, **5**, 113
Dilatant solutions, concentrated, flow behavior of, **2**, 239
Dilute polymer solute, effect on the boundary layer, **9:1**, 456
Dilute suspensions, flow of, through cylindrical tubes, **6**, 383

Dimensional approach to colloid rheology, **7**, 101
Dimethylpolysiloxane fluids, flow behavior of, **7**, 424
Dislocations in crystals, viscous motion of, **3**, 209
Dispersions, latex, coalescence of, **2**, 307
mechanical resonance, in crystalline solids, **3**, 208
at audio-frequencies, **2**, 307
Drawing, effects on the mechanical behavior of nylon 6 filaments, **3**, 214
Dumbbells, suspension of, stress–strain relations, **1**, 53
Dyed polymer films, visible dichroism of, **9:1**, 452
Dynamic aspects of viscoelasticity, **10:2**, 449
Dynamic birefringence of a thin fluid layer of oscillatory shear, **6**, 325
Dynamic compressibility of a rubber–sulfur vulcanizate and its relation to free volume, **4**, 347
Dynamic compression, of clay under an explosive pulse, **10:1**, 253
Dynamic investigations of polymer solutions in an extended range of frequencies, **8**, 117
Dynamic measurement of mechanical moduli, glass transition concentration, **6**, 27
Dynamic mechanical and creep properties, of a concentrated cellulose nitrate solution, **3**, 211
of poly-2-ethyl butyl methacrylate, **5**, 381
Dynamic mechanical properties, of fluorochemical elastomers, **2**, 23
of high density polyethylene, frequency and temperature dependence of, **5**, 261
of high polymers at low frequencies, apparatus for measuring, **3**, 27
of a model filled system, polyisobutylene–glass beads, **2**, 53
Dynamics, nonlinear Maxwell model material, **10:2**, 529
Dynamic shear, thermistor analog study of, **10:1**, 73
"Effective" solid volume–viscosity relationship of rigid spheres versus the dimensions of the measuring instrument, **3**, 215
Elastic deformation, large longitudinal retarded, of rubberlike network polymers, application of general formula of nonlinear response, **7**, 111
Elastic effects in the extrusion of polymer solutions, **6**, 386
Elastic fluid, correlations with experiments, **9:1**, 449
Maxwellian, viscosity of, **1**, 63
perfect, elastic stress–strain relations in, **9:1**, 27
in viscometric flow, stress state of, **10:1**, 431
Elasticity, of random media, **9:1**, 381
in steady flow, **10:1**, 1
Elastic materials, thermodynamics and the possibility of long range interaction in, **9:1**, 445
Elastic shear deformation in viscoelastic flow of polymer melt, die wall restriction on, **7**, 333
Elastic stresses and birefringence in flow, **5**, 163
Elastic stress–strain relations in perfect elastic fluids, **9:1**, 27
Elastic tubes, stretching over rotationally symmetric mandrels, **8**, 85
Elastic and viscous effects, separation of, in polymer flow, **5**, 355
Elastomers, amorphous, nonlinear viscoelastic response to constant strain rates, **6**, 61
castable, tear phenomena around solid inclusions in, **9:2**, 165
filled, viscoelastic behavior in the linear and nonlinear range, **9:2**, 77
fluorochemical, dynamic mechanical properties, **2**, 23

general formulation of the homogeneous thermomechanical deformation of, **7**, 417
GR-S, tensile strength of, **2**, 219
plasticized hydrocarbon, steady-state melt viscosity of, **9:2**, 17
processing of, capillary rheometry as a technique for predicting, **5**, 329
rheological analysis of, with the Mooney shearing disk viscometer, **9:1**, 457
Elastoviscometer, rotating-sphere, **9:1**, 407
Ellipsoids, prolate, concentration dependence of Newtonian viscosity of, **3**, 61
Energy dissipation of a cohesive soil by the Fourier transformation of stress relaxation response, **9:1**, 145
Entanglement in polymer solutions, use of viscosity measurements for, **2**, 309, **7**, 417
Entanglement region, effect of molecular weight and distribution on polymer rheology near, **7**, 241
Epoxy resin, amine-cured, **9:1**, 450
Equation for non-Newtonian flow, **5**, 247
Erythrocyte suspensions, effects of fibrinogen upon the fluid structure of, **7**, 412
Ester–poly(vinyl chloride) systems, linear free energy effects in, **10:2**, 513
Extrudate swelling, polymer, molecular mechanism for, **9:1**, 443
Extrusion, of polymer solutions, elastic effects in, **6**, 386
of polytetrafluoroethylene at high temperature and pressure, **7**, 231
Fatigue fracture of fibrous polymers, **9:1**, 449
Fiber molecules, rheological properties of, **4**, 191
Fibrinogen, effects upon the fluid structure of erythrocyte suspensions, **7**, 412
Fibrous polymers, fatigue fracture of, **9:1**, 449
Filled elastomer, viscoelastic behavior in the linear and nonlinear range, **9:2**, 77
Filled materials, viscoelasticity of, **9:2**, 379
Films, dyed polymer, visible dichroism of, **9:1**, 452
thin liquid, splitting of, cavitation dynamics, **6**, 197
Finite deformations under pressurization in an infinitely long cylinder, **9:1**, 273
Finite elastic theory applied to the deformation of rubbery materials, **6**, 223
Flow, of anisotropic fluids, **10:1**, 215
of blood *in vitro*, **7**, 209
correlation of data for moderately concentrated polymer solutions, **10:1**, 169
of dilute suspensions through cylindrical tubes, **6**, 383
down an inclined plane, **4**, 119
elasticity in, **10:1**, 1
electric stress and birefringence in, **5**, 163
of gelling materials in a uniform layer on a vertical plane, **8**, 73
of an incompressible viscoplastic layer on an inclined plane, **2**, 255
induced in viscoelastic liquid by a rotating cone, **9:1**, 417
instability in polymer melts, **10:1**, 181
laminar, symmetry conditions in, **5**, 149
laminar converging, of dilute polymer solutions in conical sections, **9:2**, 227
liquid, thermal feedback in, plane shear at constant stress, **7**, 195
of moderately concentrated polymer solutions in water, **8**, 3
molecular fractionation in, **10:1**, 275
of molten polymer, **9:2**, 35

non-Newtonian, around a sphere, **5**, 47
non-Newtonian, through porous media, **9:2**, 243, 251
orientation induced by, **6**, 275
of power law fluids in rectangular ducts, **9:1**, 83
in roll coaters, analysis of forces causing, **6**, 209
and shape of drops in non-Newtonian fluids, **5**, 369
slow, steady viscoelastic, a recursive approach to the theory of, **7**, 75
slow viscoelastic, recursive theory of, applied to three basic problems of hydrodynamics, **8**, 33
in square duct, **10:1**, 353
steady, of a slightly viscoelastic fluid between rotating spheres, **2**, 309
of synthetic latex dispersions, instability in, **9:2**, 371
through porous media, statistical theory of, **9:1**, 313
tube, velocity profiles in, **8**, 137
turbulent, in Couette viscometer, **10:1**, 335
two-dimensional, birefringent techniques in, **6**, 317
of two-phase systems at high temperature, **9:1**, 219
unsteady, of an Oldroyd fluid in a circular tube, **9:2**, 351
viscoelastic, approximate constitutive equations for, **9:1**, 455
of viscoelastic polymer solutions in the entrance length of a capillary tube or pipe, **10:1**, 434
Flow behavior, of concentrated (dilatant) suspensions, **2**, 239
of dimethylpolysiloxane fluids in a cone–plate viscometer, **7**, 424
polymer melt, in the barrel of a capillary rheometer, **9:2**, 405
Flow birefringence, correlation of static and dynamic measurements using, **6**, 385
of molten polyethylene, **5**, 193
parameters of, temperature dependence of, **3**, 153
of polystyrene solutions, **7**, 45
Flow curves of concentrated poly(acrylic acid) solutions, **5**, 205
Flow experiments with special capillaries in the McKee worker–consistometer, **2**, 310
Flow phenomena with oleogels, **2**, 303
Flow properties, analysis in relation to molecular parameters for polymer melts, **9:2**, 1
of attapulgite suspension in water, **5**, 67
of linear and tetrachain branched 'monodisperse' polystyrene, comparison of, **9:1**, 454
of lithium stearate–oil dispersions, **4**, 315
Fluid mixing in agitated vessels, **4**, 364
Fluids, effect of temperature on consistency of, **10:1**, 419
elastic, correlations with experiments, **9:1**, 449
frictional compressible, dynamics of application to plastico-dynamics, **4**, 367
non-Newtonian, variational principles for, **5**, 9
Fluorochemical elastomers, dynamic mechanical properties, **2**, 23
Forces causing flow in roll coaters, **6**, 209
Force (or stress) circuit diagrams, method of, in rheological applications, **7**, 424
Fractionation, molecular, in flow of polymeric fluids, **10:1**, 275
Fracture, fatigue, of fibrous polymers, **9:1**, 449
of non-Newtonian fluids at high shear stresses, **2**, 312
Frequency and temperature dependence of the dynamic mechanical properties of a high density polyethylene, **5**, 261

Frictional compressible fluids, dynamics, application to plastico-dynamics, **4**, 367
Gases, viscosity of, **2**, 311
Gelled oils, shear viscosities and stress-relaxation viscosity parameters of, **5**, 103
Gelling materials, flow in a uniform layer on a vertical plane, **8**, 73
Generator, rotational fluid flow, for studies in rheology, **7**, 181
Glass, stress relaxation in, **2**, 312
Glass beads, volume change and dewetting in poly(vinyl chloride) elastomeric composites, **3**, 113
Glass fibers, strong, cooling time of, **2**, 310
Glass transition concentration, dynamic measurement of mechanical moduli, **6**, 27
Glassy polymers, cold-drawing of, **9:1**, 446
  plasticity of, **10:1**, 441
Glucose glass near its transition temperature, viscoelastic properties of, **9:2**, 343
Greases, typical lubricating, as linear viscoelastic materials, **9:2**, 287
GR-S elastomers, tensile strength, **2**, 219
Heat generation and conduction in flow of viscous compressible liquid, **1**, 177
Heat transfer to non-Newtonian fluids under laminar flow conditions, **4**, 364
Helium II, liquid, viscosity of, **6**, 392
n-Hexadecane, viscosity of, **3**, 207
High polymers, apparatus for measuring dynamic mechanical properties at low frequencies, **3**, 27
  non-Newtonian flow of concentrated solutions of, **6**, 390
  relaxation spectra in, **2**, 95
High-shear viscometry, new instrument for, **6**, 93
High viscosities, measurement at low shear rates, **6**, 81
Hookean solid, theory of peeling through, **2**, 306
Hydrodynamic interactions of submicroscopic particles, viscometric studies, **7**, 275
Hydrodynamics, recursive theory of slow viscoelastic flow applied to three basic problems of, **8**, 33
Hydrogen embrittlement, strain aging, in alpha-beta titanium alloys, **1**, 119
Hypoelasticity, conditions for second-order waves in, **6**, 263
  and elasticity, relations between, **4**, 23
Integro-differential equations of linear viscoelasticity, biharmonic solutions of, **8**, 101
Interconverting the various mechanical properties of linear viscoelastic materials, appropriate equations for, **2**, 131
Intrinsic resonances in stressed solid materials, **5**, 297
Irreversible thermodynamics, classical, on the extension of, to large viscoelastic deformations, **10:1**, 436
Jets of viscoelastic fluids, behavior of, **3**, 181
Kinetics of stress relaxation in metals, **10:1**, 399
Laminar converging flow of dilute polymer solutions in conical sections, **9:2**, 227
Laminar flow, symmetry conditions in, **5**, 149
Laminar shear, behavior of particles in, **4**, 366
Latex dispersions, coalescence of, **2**, 307
  synthetic, instability in the flow of, **9:2**, 371
Linear and branched tetrachain 'monodisperse' polystyrene, comparison of flow properties of, **9:1**, 454

Linear polymers, determination of the molecular weight distribution of, from stress relaxation after steady flow, **7**, 420
non-Newtonian flow viscosity–shear studies of entanglement in, **6**, 107
Linear viscoelastic behavior, proposed nomenclature, **1**, 213
Linear viscoelastic deformation, general, aspects of, **7**, 171
Linear viscoelasticity, biharmonic solutions of certain integro-differential equations of, **8**, 101
solution and experimental results for a problem in, **6**, 41
Linear viscoelastic materials, approximate equations for interconverting the various mechanical properties of, **2**, 131
stress analysis for, **3**, 41
with temperature variation, stress analysis for, **4**, 233
typical lubricating greases as, **9:2**, 287
Linear viscoelastic stress–deformation relationships, **6**, 349
some generalizations of, **3**, 211
Liquid adhesives, tackiness of, **1**, 3
Liquid crystals, conservation laws for, **5**, 23
Liquid flow, in a roll nip, photographic study, **2**, 77
thermal feedback in, plane shear at constant stress, **7**, 195
Liquid helium II, viscosity of, **6**, 392
Liquids, apparent departures from Newtonian behavior in, caused by viscous heating, **9:1**, 425
Newtonian, rheology of peeling in, **2**, 9
polymers, and time–temperature superposition, **9:1**, 445
thermodynamics of transport processes in, **3**, 95
viscous compressible, heat generation and conduction in flow, **1**, 177
Lithium stearate–oil dispersions, flow properties of, **4**, 315
Locking materials, ideal, **1**, 169
theory, **3**, 13
Longitudinal retarded elastic deformation of rubberlike network polymer, **6**, 361
Low-temperature transition in polytetrafluoroethylene, **2**, 308
Lubricating greases, typical, as linear viscoelastic materials, **9:2**, 287
McKee worker–consistometer, flow experiments with special capillaries in, **2**, 310
Mammalian circulatory system, physical aspects of, **7**, 19
Mandrel, conical, stretching of a viscous tube over, **9:1**, 95
rotationally symmetric, stretching of elastic tubes over, **8**, 85
Materials, modern theories of, **4**, 9
Maxwellian elastic liquid viscosity, **1**, 63
Maxwell model material, nonlinear, dynamics of, **10:2**, 529
Measurements, viscosity, near a million seconds^{-1}, **9:2**, 49
Mechanical breakdown, in fiber bundles, time dependence of, power law breakdown rule, **2**, 195
stochastic process model, **1**, 153
Mechanical moduli, dynamic measurement of, glass transition concentration, **6**, 27
Mechanical resonance dispersion in crystalline solids, **3**, 208
at audio-frequencies, **2**, 307
Mechanism for non-Newtonian flow in suspensions of rigid spheres, **3**, 137
Melt, polymer, studies of, in an orthogonal rheometer, **9:1**, 41
Melt flow behavior, steady-state, of polyethylene blends, **9:1**, 3
Melt fracture in capillary flow of molten polyethylene, **1**, 203

Melt rheology, determination of weight-average molecular weight from, **7,** 418
of polyethylene, effect of branching on, **9:1,** 255
Melts, polymer, analysis of flow properties in relation to molecular parameters for, **9:2,** 1
polymer, shear rate dependence of viscosity and elastic compliance of, **2,** 311
Melt-viscosity relationships for molten polyethylene–paraffin wax mixtures, **6,** 179
Memory, gradually fading, thermodynamics of materials with, **9:1,** 443
shocks and acceleration waves in materials with, **9:1,** 444
Metals, stress relaxation in, **10:1,** 399
Method of force (or stress) circuit diagrams in rheological applications, **7,** 424
Micro-fracture mechanics of interfacial unbonding of polymers, **9:2,** 135
Microvascular system, rheology and dynamic anatomy of, **7,** 9
Milling Yellow suspensions, velocity profiles for two-dimensional flow of, **7,** 421
Molecular mechanism for polymer extrudate swelling, **9:1,** 443
Molecular parameters for polymer melts, analysis of flow properties in relation to, **9:2,** 1
Molecular weight, effect on stress-cracking of polyethylene, **10:2,** 501
Molecular weight and distribution, effect on polymer rheology near the entanglement region, **7,** 241
Molecular weight distribution, of polybutenes, **10:2,** 621
Molecular weight–temperature–concentration relationships for the viscosity of poly(vinyl acetate) and its solutions in diethyl phthalate and in cetyl alcohol, **5,** 381
Molten polyethylene, flow birefringence of, **5,** 193
Molten polymer, flow of, **9:2,** 35
Monodisperse polystyrene, linear and tetrachain branched, comparison of flow properties of, **9:1,** 454
viscoelastic properties of, **9:1,** 445
Mooney shearing disk viscometer, rheological analysis of elastomers with, **9:1,** 457
Neo-Hookean body, incompressible, exact solution of general plane strain deformation of, **7,** 416
Newtonian behavior, apparent departures from, in liquids caused by viscous heating, **9:1,** 425
Newtonian fluids, distribution of pressures in the roll application of, **5,** 317
rheology of peeling in, **2,** 9
Newtonian regime, upper, in polymer solutions, general observations, **6,** 119
upper, in polymer solutions, polystyrenes in toluene, **5,** 237
Newtonian viscosity of prolate ellipsoids, concentration dependence of, **3,** 41
Nonflow shrink ratio, determination of, in oriented fibers, **7,** 420
Nonlinear response, application of general formula to deformation of rubberlike network polymers, **7,** 111
Nonlinear viscoelastic material, stress–creep experiments on, to determine the kernel functions, for a multiple integral representation of creep, **9:2,** 299
Nonlinear viscoelastic response of amorphous elastomers to constant strain rates, **6,** 61
Non-Newtonian flow, around a sphere, **5,** 47
of concentrated solutions of high polymers, **6,** 390
equation for, **5,** 247

in suspensions of rigid spheres, mechanism for, **3**, 137
of polybutenes, **10:2**, 621
through porous media, **9:2**, 243, 251
viscosity–shear studies of entanglement in linear polymers, **6**, 107
Non-Newtonian fluids, flow in a square duct, **10:1**, 353
flow and shape of drops in, **5**, 369
fracture of, at high shear stresses, **2**, 312
heat transfer to, under laminar flow conditions, **4**, 364
variational principles for, **5**, 9
Non-Newtonian measurements, influence of viscometer design on, **4**, 366
Normal forces and their thermodynamic significance, **5**, 115
Normal stresses, in simple shearing flow, method of measurement of, **5**, 133
measurement of, **7**, 295
Nylon fibers, thermodynamics of stretching of, **4**, 297
Nylon 6 filaments, effects of drawing on the mechanical behavior of, **3**, 214
Nylon 66 filaments, unoriented, extension of, **7**, 423
Nylon stress–strain curves, method of generalizing the effect of temperature and rate on, **3**, 215
Oils, gelled, shear viscosities and stress-relaxation viscosity parameters of, **5**, 103
Oldroyd fluid in a circular tube, unsteady flow of, **9:2**, 351
Oleogels, flow phenomena with, **2**, 303
Orientation induced by flow, **6**, 275
Orientation mechanisms, additional, influence on the theory of streaming birefringence, **9:2**, 57
Oriented fibers, determination of non-flow shrink ratio in, **7**, 420
Oscillatory shear, dynamic birefringence of a thin fluid layer of, **6**, 325
Paper, significance of rheology in, **4**, 207
Paper coating suspension, phenomenological characterization of, **6**, 143
Parallel plate and cone–plate normal stress measurements on polyisobutylene–cetane solutions, **7**, 137
Particle motion, in viscoelastic media, **10:2**, 571
Particles, in laminar shear, behavior of, **4**, 366
randomly distributed rough, in concentrated suspensions, **9:1**, 447
Peel adhesion, micro-fracture mechanics of interfacial unbonding of polymers, **9:2**, 135
theory and analysis, bond stresses and distributions, **4**, 45
theory and analysis, mechanisms and mechanics, **3**, 161
Peeling, in a Newtonian liquid, rheology of, **2**, 9
through a Hookean solid, theory of, **2**, 306
Peeling force of adhesive joints, **4**, 75
Pendulum, viscoelastic torsional, transient response of, **9:2**, 187
Phenomenological characterization of a paper coating suspension, **6**, 143
Photographic study of liquid flow in a roll nip, **2**, 77
Plane shear at constant stress, thermal feedback in liquid flow, **7**, 195
Plastic flow of aluminum single crystals as revealed by interferometric cinemicrography, **6**, 394
Plasticity of glassy polymers, **10:1**, 441
Plastico-dynamics, application of the dynamics of frictional compressible fluids to, **4**, 367
principles of, **2**, 153
Plastics, stress dependence of the softening temperature of, **9:1**, 243
Plastics compounds, rheological factors in the mixing of, **10:1**, 438

Plastisols at elevated temperatures, measuring viscosities by thermal incline, **1**, 191
Poisson's ratio, stress dependence of, **9:1**, 243
Poly(acrylic acid) solutions, concentrated, flow curves of, **5**, 205
Polybutadiene, flow behavior, **10:2**, 545
Poly-*n*-butyl methacrylate, dynamic mechanical properties of concentrated solutions of, **3**, 210
Polycarbonates, temperature effect, **10:2**, 627
Polycarbonate solutions and melts, rheological properties of, **10:1**, 433
Polyelectrolytes, rheology of, experimental determination of the correlation of M_r with other average molecular weights, **7**, 125
rheology of, flow curves of concentrated poly(acrylic acid) solutions, **5**, 205
Poly-2-ethyl butyl methacrylate, dynamic mechanical properties and creep of, **5**, 381
Polyethylene, effect of branching on the melt rheology of, **9:1**, 255
high density, frequency and temperature dependence of the dynamic mechanical properties of, **5**, 261
molten, capillary flow of, **1**, 203
molten, flow birefringence of, **5**, 193
and polypropylene, viscoelastic behavior of, **3**, 81
stress-cracking of, **10:2**, 501
viscoelastic behavior in capillary flow, **10:1**, 299
Polyethylene adhesive joints, **3**, 5
Polyethylene blends, steady-state melt flow behavior of, **9:1**, 3
Polyethylene melt, measurements of relaxation times of, **10:1**, 434
Polyethylene melt viscosity, shear rate–temperature superposition, **9:1**, 53
Polyethylene (molten)–paraffin wax mixtures, melt-viscosity relationships for, **6**, 179
Polyisobutenes, molecular weight distribution and non-Newtonian flow, **10:2**, 621
Polyisobutylene, in cetane, viscoelastic properties of concentrated solutions of, **7**, 413
and polystyrene dilute solutions, viscoelastic properties of, **7**, 414
shear behavior of solutions of, **10:1**, 157
Polyisobutylene–cetane solutions, parallel plate and cone–plate normal stress measurements on, **7**, 137
Polyisobutylene–glass beads, dynamic mechanical properties of a model filled system, **2**, 53
Polyisobutylene solutions, effect of degradation, **10:2**, 489
normal stress effect, classification and application of rheological theories, **1**, 37
normal stress effect, measurements, **1**, 25
normal stresses, flow curves, flow birefringence, and normal stresses, **1**, 95, 109
Polymer, molten, flow of, **9:2**, 35
Polymer–diluent systems, viscosity and glass transition behavior of, **7**, 419
Polymer extrudate swelling, molecular mechanism for, **9:1**, 443
Polymer flow, separation of elastic and viscous effects in, **5**, 355
Polymeric liquids, analysis of flow properties in relation to molecular parameters for, **9:2**, 1
flow behavior in the barrel of a capillary rheometer, **9:2**, 405
flow instability in, **10:1**, 181
fracture and extrudate distortion, effect of die entry geometry on, **5**, 341
in an orthogonal rheometer, **9:1**, 41

tensile strength and tacky behavior of **4**, 91
Polymer rheology, effect of molecular weight and distribution on, near the entanglement region, **7**, 241
Polymers, rheo-optical properties of, **6**, 301
rubberlike network, large longitudinal retarded elastic deformation of, **6**, 361
Polymer solutions, constitutive equations for, **10:1**, 431
dynamic investigations of, in an extended range of frequencies, **8**, 117
elastic effects in the extrusion of, **6**, 386
entanglement in, by viscosity measurements, **7**, 417
upper Newtonian regime in, general observations, **6**, 119
viscoelastic, flow in the entrance length of a capillary tube or pipe, **10:1**, 434
Poly(4-methyl pentene-1), dynamic mechanical properties of, **7**, 416
Poly(neopentyl succinate), rheology of, **6**, 131
Polynomial constitutive equations for viscoelastic materials with large initial deformation, **9:1**, 171
Polyphosphoryldimethylamides, viscoelastic relaxation mechanism in, **9:1**, 229
Polystyrene, dilute, viscoelastic properties of, **6**, 391
linear and tetrachain branched 'monodisperse,' comparison of flow properties of, **9:1**, 454
monodisperse, viscoelastic properties of, **9:1**, 445
tensile creep at elevated temperatures, **8**, 61
in toluene, **5**, 237
Polystyrene solutions, flow birefringence of, **7**, 45
Polytetrafluoroethylene, extrusion of, at high temperature and pressure, **7**, 231
low-temperature transition in, **2**, 308
Poly(vinyl acetate) and its solutions in diethyl phthalate and in cetyl alcohol, molecular weight–temperature–concentration relationships for the viscosity of, **5**, 381
Poly(vinyl chloride), characterization of, **10:1**, 25
elastomeric composites under large deformations, **3**, 113
Poly(vinyl chloride)–ester systems, linear free energy effects in, **10:2**, 513
Porous media, non-Newtonian flow through, **9:2**, 243, 251
statistical theory of flow through, **9:1**, 313
Power law breakdown rule, mechanical breakdown in fiber bundles, **2**, 195
Power law fluids, flow of, in rectangular ducts, **9:1**, 83
P_{22}–P_{33}, measurement of, in axial annular flow, **9:1**, 458
Pressure losses in the barrel, effect on capillary flow measurements, **9:1**, 13
Pressures, distribution of, in the roll application of Newtonian fluids, **5**, 317
Primary and secondary consolidation, rheology of, **7**, 418
Processing of elastomers, capillary rheometry as a technique for predicting, **5**, 329
Prolate ellipsoids, concentration dependence of Newtonian viscosity of, **3**, 61
Propellants, highly filled solid, rheology of, **10:1**, 437
Pseudoplastic suspension, application of the method of composition and linear regression analysis, **5**, 53
Pulsing blood flow in capillary tubes, **10:1**, 440

Radiofrequency spectroscopy applications, **3,** 209
Randomly distributed rough particles in concentrated suspensions, **9:1,** 447
Random media, dielectric constants, permeabilities, and conductivities of, **9:1,** 357
elasticity of, **9:1,** 381
statistics of, **9:1,** 293
Rate type materials and the principle of determinism, **5,** 35
Raw rubber, mechanical behavior of, in the Mooney viscometer, **7,** 423
Recoil of viscoelastic fluids, **9:1,** 456
Red cells and plasma proteins, interaction of, **6,** 19
"Regimes of flow" or systems, four separate, of blood rheology, **3,** 213
Relations between hypoelasticity and elasticity, **4,** 23
Relaxation, ultrasonic structural, in liquids and its relation to dielectric and NMR relaxation, **10:1,** 439
Relaxation mechanism, viscoelastic, of inorganic polymers, the polyphosphoryldimethylamides, **9:1,** 229
Relaxation properties of polymers in terms of time-dependent correlation functions, **10:1,** 435
Relaxation spectra in high polymers, **2,** 95
Relaxation times of a polyethylene melt, measurements of, **10:1,** 434
Resin, epoxy, amine-cured, **9:1,** 450
Response, transient, of a viscoelastic torsional pendulum, **9:2,** 187
Response of a distributed, thermally activated system, **7,** 411
Rheological measurements with the Brabender plastograph, **4,** 335
Rheological properties of molecules in fibers, **4,** 191
Rheometer, orthogonal, studies of polymer melt in, **9:1,** 41
Rheo-optical properties of polymers, **6,** 301, **7,** 411, **9:1,** 453
Rigid particles, viscosity of concentrated suspensions of, **6,** 393
Rigid spheres, "effective" solid volume–viscosity relationship of, versus the dimensions of the measuring instrument, **3,** 215
suspensions of, mechanism for non-Newtonian flow in, **3,** 137
Roll application of Newtonian fluids, distribution of pressures in, **5,** 317
Roll coaters, forces causing flow in, **6,** 209
Roll nip, photographic study of liquid flow in, **2,** 77
Rotating cone, flow induced in viscoelastic liquid by, **9:1,** 417
Rotating-sphere elastoviscometer, **9:1,** 407
Rotational fluid flow generator for studies in rheology, **7,** 181
Rotational viscometer using an a.c. torque to balance loop and air bearing, **7,** 319
Rouse-Bueche theory of viscoelastic behavior, **4,** 365
Rubber, raw, mechanical behavior of, in the Mooney viscometer, **7,** 423
rupture of, **4,** 179
stretched natural, stress relaxation and dynamic mechanical properties of, **6,** 384
Rubberlike network polymers, deformation of, application of general formula of nonlinear response, **7,** 111
large longitudinal retarded elastic deformation of, **6,** 361
Rubbers, crosslinked, mechanical losses and network structure, **9:1,** 450
natural and polybutadiene, creep compliance of, **10:1,** 440
Rubber–sulfur vulcanizate, dynamic compressibility, **4,** 347

Rubbery materials, deformation of, application of finite elastic theory to, **6**, 223
Rupture of rubber, **4**, 179
SBR gum vulcanizates, statistical variability of ultimate properties of, **9:1**, 195
Secondary normal stress difference for aqueous polymer solutions, **9:2**, 273
Secondary stresses in anisotropic amorphous media, **3**, 101
Second-order viscoelasticity, normal stresses in, **5**, 41
Second-order waves in hypoelasticity, conditions for, **6**, 263
Sediment volume as a determining parameter, viscosity of suspensions of spheres, **1**, 15
Separation of elastic and viscous effects in polymer flow, **5**, 355
Shear, oscillatory, dynamic birefringence of a thin fluid layer of, **6**, 325
thermistor analog study of, **10:1**, 73
Shear behavior of polyisobutylene solutions, **10:1**, 157
Shear flow of monolayers of suspended particles, **10:1**, 229
Shear-rate dependence, of viscosity of blood, interaction of red cells and plasma proteins, **6**, 19
of the viscosity and elastic compliance of polymer melts, **2**, 311
Shear rate–temperature superposition in polyethylene melt viscosity, **9:1**, 53
Shear viscosities and stress-relaxation viscosity parameters of gelled oils, **5**, 103
Shocks and acceleration waves in materials with memory, **9:1**, 444
Silicones, stress-optical properties of, **4**, 169
Snow creep under combined stress, **2**, 175
Soft viscoelastic materials, torsion pendulum for dynamic and creep measurements of, **2**, 39
Soil, cohesive, energy dissipation by the Fourier transformation of stress relaxation response, **9:1**, 145
cohesive, in the frequency domain, viscoelastic response of, **9:2**, 329
Solid inclusions in castable elastomers, tear phenomena around, **9:2**, 165
Solid materials, stressed, intrinsic resonances in, **5**, 297
Solid propellants, highly filled, rheology of, **10:1**, 437
Solute, dilute polymer, effect on the boundary layer, **9:1**, 456
Solution and bulk properties of branched polymers, **9:1**, 455
Solutions, aqueous polymer, secondary normal stress difference for, **9:2**, 273
concentrated, viscosity of, **9:1**, 321
concentrated (dilatant), flow behavior of, **2**, 239
dilute polymer, in conical sections, laminar converging flow of, **9:2**, 227
moderately concentrated polymer, viscosity and thermodynamics of, **7**, 415
polymer, elastic effects in the extrusion of, **6**, 386
polymer, study of entanglement in, **2**, 309
Sphere suspensions, viscosity, **1**, 15
Spherulite deformation, models of, taking into account changes in volume, **10:1**, 432
Splitting of thin liquid films, cavitation dynamics, **6**, 197
Stagnant motions, substantially, **6**, 293
Static and dynamic measurements, correlation of, using flow birefringence, **6**, 385
Statistical continuum theories, **9:1**, 339
Steady-state melt flow behavior of polyethylene blends, **9:1**, 3

Steady-state melt viscosity of plasticized hydrocarbon elastomers, **9:2,** 17
Steady-state and vibrational results for viscoelastic liquids, correlation of, **6,** 392
Steel ball, penetration of, **10:1,** 97
Stochastic process model for mechanical breakdown, **1,** 153
Stored energy function, for small values of strain invariants, **9:1,** 451
for small values of strain variants, **10:1,** 369
Strain aging hydrogen embrittlement in alpha-beta titanium alloys, **1,** 119
Strain energy function "*W*," an experimental method to measure, **7,** 422
Strain invariants, stored energy function for small values of, **9:1,** 451, **10:1,** 369
Strain in orthotropic heterogeneous viscoelastic cylinder with burning inner boundary, **10:1,** 133
Streaming birefringence, **6,** 393
influence of additional orientation mechanisms on the theory of, **9:2,** 57
and rotary strain birefringence measurements, a comparison, **7,** 33
Stress, parallel plate and cone–plate normal, measurements on polyisobutylene–cetane solutions, **7,** 137
Stress analysis for linear viscoelastic materials, **3,** 41
with temperature variation, **4,** 233
Stress cracking, environmental, time, temperature, and molecular weight effects in, **9:2,** 121
of polyethylene, **10:2,** 501
Stress–creep experiments on a nonlinear viscoelastic material to determine the kernel functions for a multiple integral representation of creep, **9:2,** 299
Stress–deformation relationships, linear viscoelastic, some generalizations of, **3,** 211
Stress dependence of Poisson's ratio and of the softening temperature of plastics, **9:1,** 243
Stressed solid materials, intrinsic resonances in, **5,** 297
Stress effect, normal, in polyisobutylene solutions, classification and application of rheological theories, **1,** 37
normal, in polyisobutylene solutions, measurements, **1,** 25
Stresses, normal, in second-order viscoelasticity, **5,** 41
normal, in simple shearing flow, method of measurement of, **5,** 133
measurement of, **7,** 295
transient thermal, in a slab with temperature-dependent viscoelastic properties, **7,** 155
Stress-optical coefficient, concentration dependence of, **4,** 159
Stress-optical properties of silicones, **4,** 169
Stress in orthotropic heterogeneous viscoelastic cylinder with burning inner boundary, **10:1,** 133
Stress relaxation, and dynamic mechanical properties of stretched natural rubber, **6,** 384
with finite strain, study of, **7,** 391
in glass, **2,** 312
in metals, **10:1,** 399
Stress state of elastic fluids in viscometric flow, **10:1,** 431
Stress–strain curves of nylon, method of generalizing the effect of temperature and rate on, **3,** 215
Stress–strain relations, elastic, in perfect elastic fluids, **9:1,** 27
in a suspension of dumbbells, **1,** 53
Stress–strain–time data for asphalt concrete, analysis and interrelation of, **8,** 19

Stretching, of elastic tubes over rotationally symmetric mandrels, **8**, 85
of nylon fibers, thermodynamics of, **4**, 297
of viscous tube over a conical mandrel, **9:1**, 95
Structures, rheology in search of, **4**, 363
Submicroscopic particles, hydrodynamic interactions of, viscometric studies, **7**, 275
Surface load, time-dependent, **10:1**, 85
Suspensions, attapulgite, in water, flow properties of, **5**, 67
concentrated, randomly distributed rough particles in, **9:1**, 447
dilute, flow of, through cylindrical tubes, **6**, 383
of dumbbells, stress–strain relations, **1**, 53
paper coating, phenomenological characterization of, **6**, 143
pseudoplastic, application of the method of composition and linear regression analysis, **5**, 53
of rigid spheres, mechanism for non-Newtonian flow in, **3**, 137
of spheres, viscosity, **1**, 15
Symmetry conditions in laminar flow, **5**, 149
Synovial fluid, dynamic mechanical properties of, **9:1**, 448
Systems with viscosity dependent upon free volume, bulk creep and recovery in, **5**, 285
Tackiness of liquid adhesives, **1**, 3
Tear phenomena around solid inclusions in castable elastomers, **9:2**, 165
Temperature dependence, of flow birefringence parameters, **3**, 153
of mechanical behavior of polymer solids, studies by a creep recovery method, uniaxial compression method, **7**, 253
Tensile creep of polystyrene at elevated temperatures, **8**, 61
Tensile strength, of GR-S elastomers, **2**, 219
and tacky behavior of polymeric liquids, **4**, 91
Thermal effects in model viscoelastic solids, **9:2**, 103
Thermal feedback, effect in liquid flow, **10:2**, 593
in liquid flow, plane shear at constant stress, **7**, 195
Thermal incline, means of measuring viscosities of plastisols at elevated temperatures, **1**, 191
Thermal stresses, transient, in a slab with temperature-dependent viscoelastic properties, **7**, 155
Thermistor analogs for model viscous and viscoelastic systems, **9:2**, 213
Thermistor analog study of dynamic shear, **10:1**, 73
Thermodynamic analysis of deformable media, **9:2**, 389
Thermodynamic approach to rheology, **4**, 367
Thermodynamics, classical irreversible, on the extension of, to large viscoelastic deformations, **10:1**, 436
of materials with gradually fading memory, **9:1**, 443
and the possibility of long-range interaction in elastic materials, **9:1**, 445
of stretching of nylon fibers, **4**, 297
of transport processes in liquids, **3**, 95
Thermodynamic significance of normal forces, **5**, 115
Thermostatics of continuous media, **3**, 212
Time, temperature, and molecular weight effects in environmental stress cracking, **9:2**, 121
Time dependence of mechanical breakdown in bundles of fibers, power law breakdown rule, **2**, 195
Time-dependent correlation functions, relaxation properties of polymers in terms of, **10:1**, 435

Titanium alloys, alpha-beta, strain aging hydrogen embrittlement, **1**, 119
Torsional creep and recovery, an instrument for measuring, **7**, 61
Torsion pendulum for dynamic and creep measurements of soft viscoelastic materials, **2**, 39
Transport processes in liquids, thermodynamics of, **3**, 95
1,3,5-Tri-α-naphthyl benzene, rheological properties of, **9:2**, 421
Tube flow, velocity profiles in, **8**, 137
Turbulent flows in Couette viscometer, **10:1**, 335
Two-dimensional flow, birefringent techniques in, **6**, 317
Two-dimensional rheology and its application to cereal protein monolayers, **6**, 384
Two-phase systems, flow at high temperature, **9:1**, 219
Ultrasonics, use in rheology, **3**, 207
Ultrasonic structural relaxation in liquids and its relation to dielectric and NMR relaxation, **10:1**, 439
Unbonding, interfacial, of polymers, microfracture mechanics of, **9:2**, 135
Uniaxial compression method, **6**, 388
Upper Newtonian regime in polymer solutions, general observations, **6**, 119
  polystyrenes in toluene, **5**, 237
Variability, statistical, of ultimate properties of SBR gum vulcanizates, **9:1**, 195
Variational principles for non-Newtonian fluids, **5**, 9
Velocity profiles, in tube flow, **8**, 137
  for two-dimensional flow of Milling Yellow suspensions, **7**, 421
Vibrational measurements with large amplitudes, **10:1**, 317
Vibrations and wave propagation in aluminum alloys at elevated temperatures, **6**, 157
Viscoelastic behavior, of filled elastomer in the linear and nonlinear range, **9:2**, 77
  of polyethylene and polypropylene, **3**, 81
  Rouse-Bueche theory of, **4**, 365
Viscoelastic flow, approximate constitutive equations for, **9:1**, 455
  of polymer melt, die wall restriction on elastic shear deformation in, **7**, 333
  slow, recursive theory of, applied to three basic problems of hydrodynamics, **8**, 33
  slow, steady, a recursive approach to the theory of, **7**, 75
Viscoelastic fluids, behavior of jets of, **3**, 181
  development of a simple constitutive equation, **7**, 421
  recoil of, **9:1**, 456
  slightly, steady flow between rotating spheres, **2**, 309
Viscoelasticity, dynamic aspects of, **10:2**, 449
  of filled materials, **9:2**, 379
  finite linear, **10:1**, 385
  linear, biharmonic solutions of certain integro-differential equations of, **8**, 101
  second-order, normal stresses in, **5**, 41
Viscoelastic liquids, correlation of steady-state and vibrational results for, **6**, 392
  flow induced in, by a rotating cone, **9:1**, 417
Viscoelastic materials, nonlinear, stress–creep experiments on to determine the kernel functions for a multiple integral representation of creep, **9:2**, 299
  soft, torsion pendulum for dynamic and creep measurements of, **2**, 39
  with large initial deformation, polynomial constitutive equations for, **9:1**, 171

Viscoelastic models, experimental appraisal of, **10:1**, 191; **10:2**, 653
Viscoelastic particle between sliding surfaces, the dynamics of, **6**, 389
Viscoelastic properties, of dilute polystyrene solutions and verification of the Zimm theory, **6**, 391
of glucose glass near its transition temperature, **9:2**, 343
of monodisperse polystyrene, **9:1**, 445
temperature-dependent, determination of transient thermal stresses in a slab with, **7**, 155
Viscoelastic relaxation mechanism of inorganic polymers, the polyphosphoryldimethylamides, **9:1**, 229
Viscoelastic response of a cohesive soil in the frequency domain, **9:2**, 329
Viscoelastic solids, model, thermal effects in, **9:2**, 103
Viscoelastic stress analysis of a spinning hollow circular cylinder with an ablating pressurized cavity, **7**, 357
Viscoelastic torsional pendulum, transient response of, **9:2**, 187
Viscometer, absolute torsional pendulum, **3**, 69
rotational, using an a.c. torque to balance loop and air bearing, **7**, 319
Viscometer design, influence on non-Newtonian measurements, **4**, 366
Viscometric flow, stress state of elastic fluids in, **10:1**, 431
viscous heating correction for, **6**, 253
Viscometric studies of hydrodynamic interactions of submicroscopic particles, **7**, 275
Viscometry, high-shear, new instrument for, **6**, 93
Viscoplastic layer, incompressible, flow on an inclined plane, **2**, 255
Viscosity, of blood, shear-rate dependence of, interaction of red cells and plasma proteins, **6**, 19
of concentrated solutions, **9:1**, 321
of concentrated suspensions of rigid particles, **6**, 393
of dilute solutions of linear associative colloids, **7**, 414
and elastic compliance of polymer melts, shear rate dependence of, **2**, 311
of gases, **2**, 311
and glass transition behavior of polymer–diluent systems, **7**, 419
of *n*-hexadecane, **3**, 207
of liquid helium II, **6**, 392
of Maxwellian elastic liquid, **1**, 63
of polyethylene melt, **9:1**, 53
steady-state melt, of plasticized hydrocarbon elastomers, **9:2**, 17
of suspensions of spheres, **1**, 15
Viscosity measurements and study of entanglement of polymers in solution, **7**, 417
Viscosity measurements for study of entanglement in polymer solutions, **2**, 309
Viscosity measurements near a million seconds^{-1}, **9:2**, 49
Viscous compressible liquid, heat generation and conduction in flow of, **1**, 177
Viscous heating causing apparent departures from Newtonian behavior in liquids, **9:1**, 425
Viscous heating correction for viscometer flows, **6**, 253
Viscous motion of dislocations in crystals, **3**, 209
Viscous tube, stretching of, over a conical mandrel, **9:1**, 95
Viscous and viscoelastic systems, thermistor analogs for, **9:2**, 213
Visible dichroism of dyed polymer films, **9:1**, 452
Volume change and dewetting in glass beads–poly(vinyl chloride) elastomeric composites, **3**, 113
Vulcanizates, rubber–sulfur, dynamic compressibility of, **4**, 347

SBR gum, statistical variability of ultimate properties of, **9:1**, 195
Weight-average molecular weight, determination of, from melt rheology studies, **7**, 418
Weissenberg rheogoniometer, **10:2**, 467
Woodward, experiments on laterally vibrating beams under axial tension, **10:1**, 51
Yield stresses and flow properties of carboxypolymethylene–water systems, **5**, 221
Yield stress master curves for various polymers below their glass transition temperatures, **9:1**, 65
Zero shear melt viscosity and the related friction coefficient and critical chain length, dependence on measurable characteristics of chain polymers, **9:1**, 453
Zinc phosphinate polymer, creep and recovery properties of, **9:1**, 119
